

Vision for Science and Principles for Good Science

Teaching and Learning at Nanpean CP School

Our School Community, including external people who are invested in helping our whole school family, all agree that Science is good when...

Think Like a Scientist!

**We investigate big questions
with curiosity in science to
develop our understanding
of the world around us.**

We promote curiosity to help us ask and find ways to answer questions.

We explore ideas using scientific vocabulary and develop our knowledge in a hands on, practical and investigative way.

We value the power of science and become the Scientists of the future!

...you find out something for yourself.

...it explains things you don't understand.

...children get to explore for themselves. A chance to wonder.

...we do experiments because I like to see science happening.

...it enthuses people about their future opportunities by highlighting where science can take you. Ideally by linking with local and national organisations. It is also good when it identifies the areas that interest their students and incorporates that into lessons as a hook into the subject. We couldn't live without science.
